AUTOMATED DIGITAL STOP MAKER ADDS TABLE TOP CONFIGURATION

AMES, IA, JULY 15, 2009

RazorGage has begun shipments of their second enhanced design digital positioner suited for heavier duty applications. The new extra rigid "ST" model carriage incorporates two lubed-for-life circulating ball bearing blocks leaving room for a pneumatic brake option between. The brake holds against the precision hardened steel rail so that drive components are not subjected to the force of material momentum typically experienced when positioners are used on roller table configurations.

RazorGage continues to ship all systems with touch screen Microsoft Windows XP™ based computers compatible with most major industry

software packages such as Glazier Center's Athena™.

RazorGage-ST with saw and roller table options

Cut lists may be entered either through a network, USB flash drive or manually at the screen. Fully automated push feed cutting solutions with clamps, gripper options and extrusion fixtures can be produced to meet special application needs.
